It's a very light program that allow to protect your calculator from indiscreet eyes.

In order to be light and economic for you battery the program shows the password clearly so look around you before to enter it!
For the maximum security the password is contained in the program text: to modify it open the program and enter the new password instead of the old (Default is "Password") where underlined down

```
password()
Prgm
Lbl  start
0à fine
Try
 Request  "Password",pass
 If pass="Password" Then
  1à fine
 EndIf
 Else
 ClrErr
 0à fine
EndTry
If  fine=0:Goto  start
DelVar  pass,fine
EndPrgm
```

For example:

```
password()
Prgm
Lbl  start
0à fine
Try
 Request  "Password",pass
 If pass="Newpassword" Then
  1à fine
 EndIf
 Else
 ClrErr
 0à fine
EndTry
If  fine=0:Goto  start
DelVar  pass,fine
EndPrgm
```

Remember that the program distinguishes capital letter from small letter!

This program has been already used many times without problems. If you finds any bug first assure you to have selected the English language in the mode and not to have translated the code with any program. If the problem persists please let me know.
For a better and faster answer please enclose some screenshot of the bug: entered inputs, expected outputs, error messages, erroneous code line, mode setting… it will help me very much!
My address is paolosilingardi@interfree.it . Thank you very much for your help!
