

This program uses a database and linear interpolation method to provide data relative to Temperature, Internal Energy, Enthalpy and Entropy of the most common gases. For the last one, Pressure is taken into account. Knowing one of the first 4 variables and the Pressure (that influences only the Entropy) the others are obtained. If never Entropy nor Pressure are known, Pressure is equal to 1 bar per default.

In addition for each gas is provided a list of some fundamental constants: Critic Pressure, Critic Temperature...

The program supports all units: you can chose to use program defaults units (with display digits control), SI Units, Eng/US units or custom units that you can save and/or set like default:

Example with Program Defaults

You know Temperature T (450 K) and Pressure p (1.5 bar) and you want Entropy S , Enthalpy h and Internal Energy u of H_2 .

Enter `gastab()` and select the gas you want and Properties

Enter

H2 Properties

Insert known data only

T [K]: 450

u [kJ/kg]:

h [kJ/kg]:

S [kJ/(kg·K)]:

p [bar]: 1.5

RUN BACK

Enter=OK ESC=CANCEL

gascon 7

MAIN DEG AUTO FUNC 0/99

Enter

And you'll have:

H2 Properties

Insert known data only

T [K]: 450

u [kJ/kg]: 4576.75

h [kJ/kg]: 6447.4

S [kJ/(kg·K)]: 69.6029

p [bar]: 1.5

RUN BACK

Enter=OK ESC=CANCEL

gascon 7

TYPE * (ENTER)=OK AND (ESC)=CANCEL

If you know the Entropy ($80 \frac{kJ}{kg \cdot K}$) and Pressure (1.5 bar) and you want T,u,h

H2 Properties

Insert known data only

T [K]:

u [kJ/kg]:

h [kJ/kg]:

S [kJ/(kg·K)]: 80

p [bar]: 1.5

RUN BACK

Enter=OK ESC=CANCEL

gascon 7

MAIN DEG AUTO FUNC 0/99

Enter

You will have:

H2 Properties

Insert known data only

T [K]: 907.63

u [kJ/kg]: 9426.67

h [kJ/kg]: 13199.33

S [kJ/(kg·K)]: 80

p [bar]: 1.5

RUN BACK

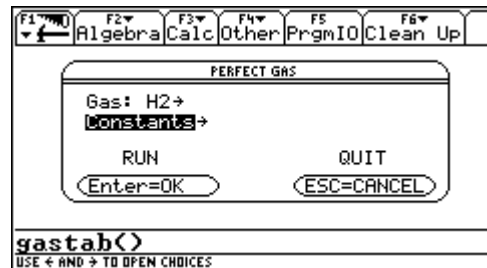

Enter=OK ESC=CANCEL

gascon 7

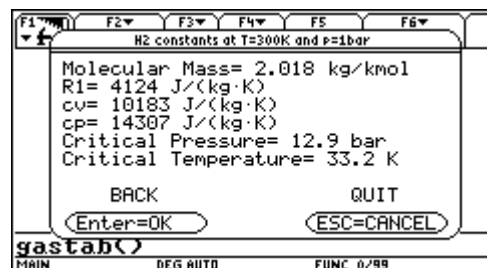

TYPE * (ENTER)=OK AND (ESC)=CANCEL

If you want to know H2 constants

Back and select constants

Enter

Usually you need to know Pressure (p) or Entropy (S), if don't know S neither p the program takes p=1 bar per default.

This program has been already used many times without problems. If you find any bug first assure you to have selected the English language in the Mode and not to have translated the code with any program. If the problem persists, please, let me know.

For a better and faster answer, please, enclose some screenshot of the bug: entered inputs, expected outputs, error messages, erroneous code line, Mode setting... it will help me very much!
