1 Introduction

CCleaner (Crap Cleaner) from Piriform is a very good program for your PC. It cleans unnecessary files and scans the registry for problems and fix them, so it makes your PC faster and best of: all it's free!

About two years ago I started to make a program for your TI-84 plus that do the same: Ccleaner (Calculator Cleaner). If you playing games on your calculator or running a lot of programs they sometimes leave a lot of variables and other thing behind when you close them. So Ccleaner simply deletes the files you don't need anymore. The final version is v4.6. It's It is simple to use but I wanted to make it even more simple. With the awesome application DoorsCS from Kerm Martian I was able to make a version of Ccleaner with a mouse-based interface like on your PC. This version is v5.0; it does the same as v4.6 but with a user friendly GUI. Both versions show you how many memory is used (RAM and ROM) and let you chose witch variables need to be cleaned:

- Input from homescreen
- Real vars
- Matrix
- String
- List (L1 ... L6)
- Y-Vars
- Pictures
- Graf databases (GDB)

2 Installation

Just send the group file 'Clean028.8xg' to your calculator with your link-cable. Then press 2ND, MEM (above the +), go to Group or press 8 then press the arrow to right (UNGROUP), select CLEAN028 in the list and it should ungrouping. The following program's should be ungrouped: Clean, CD and CL. Now you have Ccleaner v5.0 on your calc.

| | |
|---|---|
| <pre>MEMORY 1>About 2:Mem Mgmt/Del... 3:Clear Entries 4:ClrAllLists 5:Archive 6:UnArchive 7:Reset...</pre> | <pre>MEMORY 2:Mem Mgmt/Del... 3:Clear Entries 4:ClrAllLists 5:Archive 6:UnArchive 7:Reset... 8:Group...</pre> |
|---|---|

But you cant run it without DoorsCS:

Go to http://dcs.cemetech.net/index.php?title=Main_Page , download it and send it to your calc. You will be happy with this app!

3 Running CCleaner v5.0

To run CCleaner you go to APPS and the select DoorsCS7 from the list. The first time you run it, it will show you the splash-screen and a little information to get started.

After that you will see the home screen:

On my calc I made a folder named CCleaner where I put the files CD, CL and CLEAN in, so I have an orderly view.

Move with the cursor on the icon of CCleaner and press 2ND or ENTER. Note: you can't run CD and CL but CCleaner need thes files to run correctly. When CCleaner is started it will look like this; on the left you have five buttons:

3.1 Quit

Close CCleaner and return to DoorsCS homescreen. If you are back in DoorsCS you can press 'Clear' to return to the calculators homescreen

3.2 Info

A little extra information.

3.3 Memory

Shows you the amount of RAM and ROM being used.

3.4 Options

Here you can select what needs to be cleared. Pictures en GDB in archive will not be cleared, CCleaner simply skips them. The only things that will be cleared in the example above are: Input, Real, Matrix, String and Y-vars. To save changes you made just hit 'Save' otherwise hit 'Cancel'. It's also possible to select everything or none of them. Now CCleaner goes back to the homescreen where you can select 'Clean'.

3.5 Clean

If you click on this CCleaner ask you for confirmation.

After hitting 'Yes' it will delete the files selected under 'Options'. Right of it there is shown an estimation of the amount of memory being cleared for each item:

There is a little progress bar on top. After cleaning just press 'Enter' on your calc. The is shows you a box with an estimation of the amount of memory in total is cleared. Click in the box to return to the homescreen. From there you can 'Quit' to DoorsCS.

4 Version history

4.1 Updates in version 3

- GUI updated
- Time added
- CCleaner doesn't startup anymore when you haven't got enough free RAM
- Error when didn't shutdown correctly last time

4.2 Updates in version 4

- Reduce in file size
- Whole new GUI
- Doesn't delete archived variables
- CCleaner Image in DoorsCS
- Minor changes

4.3 Updates in version 5

- Only run in DoorsCS 6 or higher
- GUI with a mouse-based interface
- Some minor changes
